## Script for 2011 ME227 HW 7 Problem 1

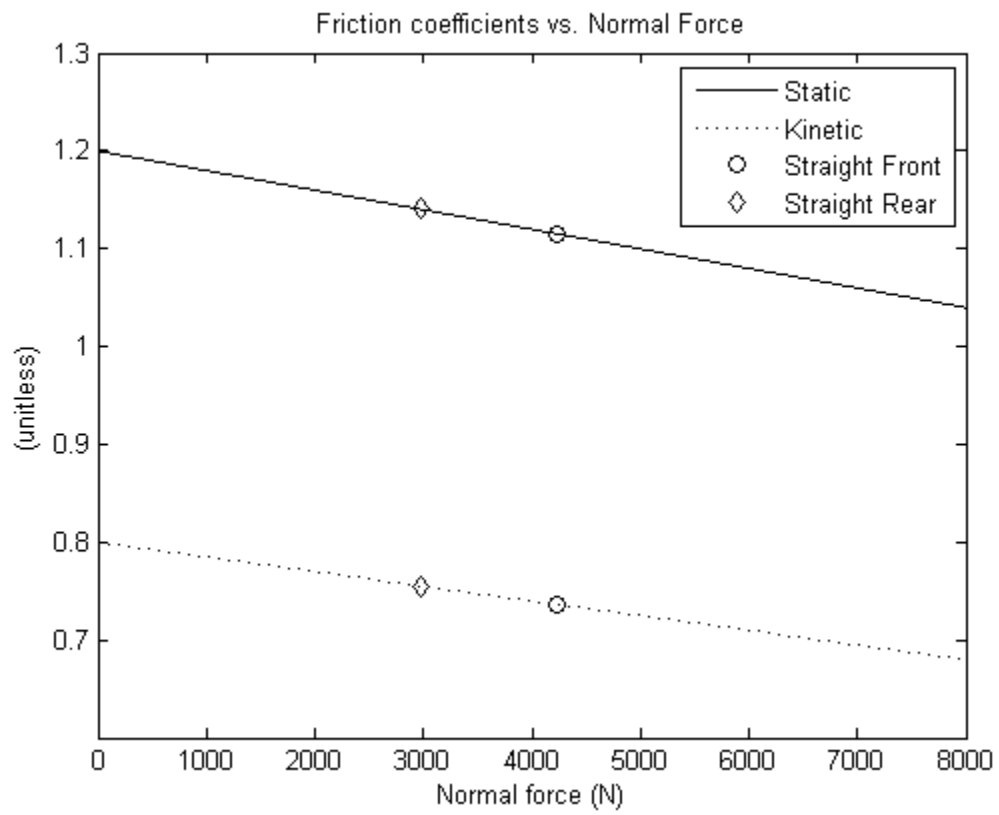

Author: Ruslan Kurdyumov Date: May 19, 2011

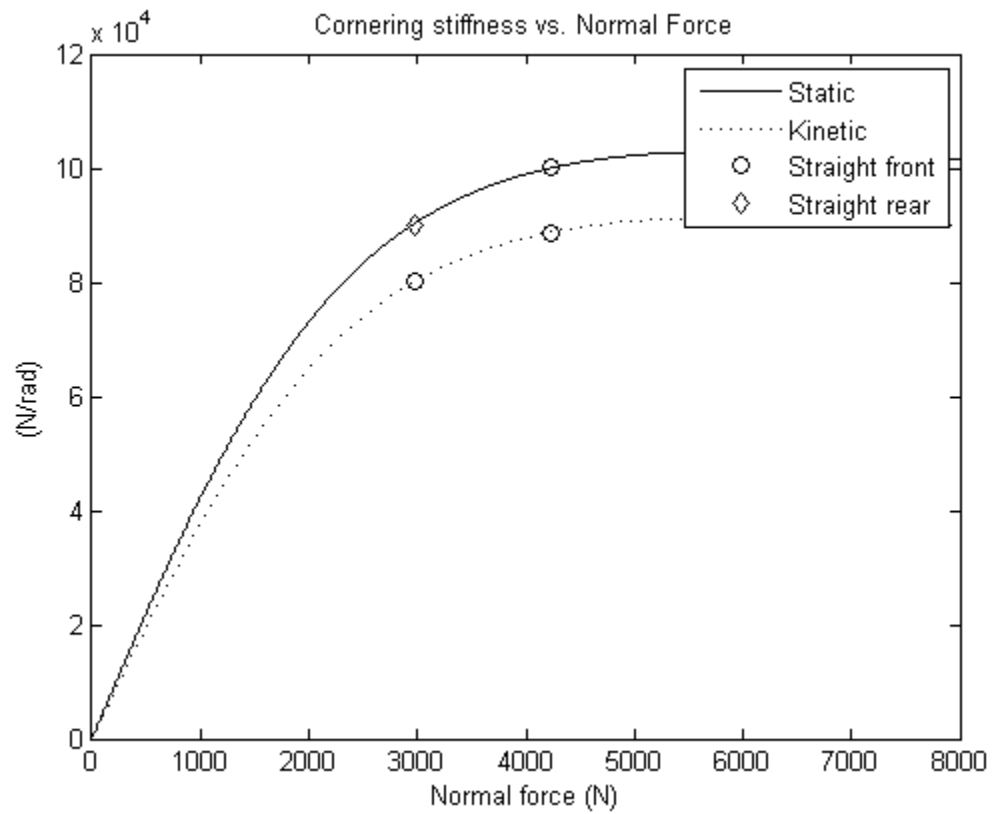

### (2.4) Nonlinear bike handling diagram w/ ramp input

### (7.1) Nonlinear four wheel handling diagram w/ ramp input

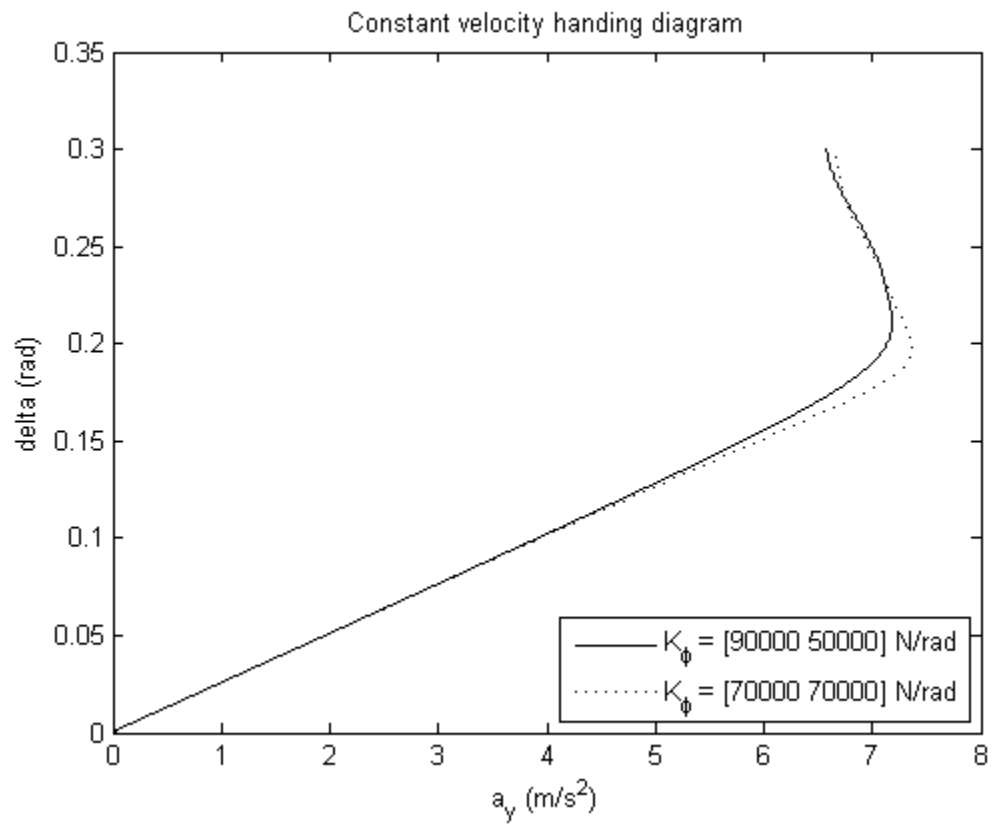

## (7.1.1)

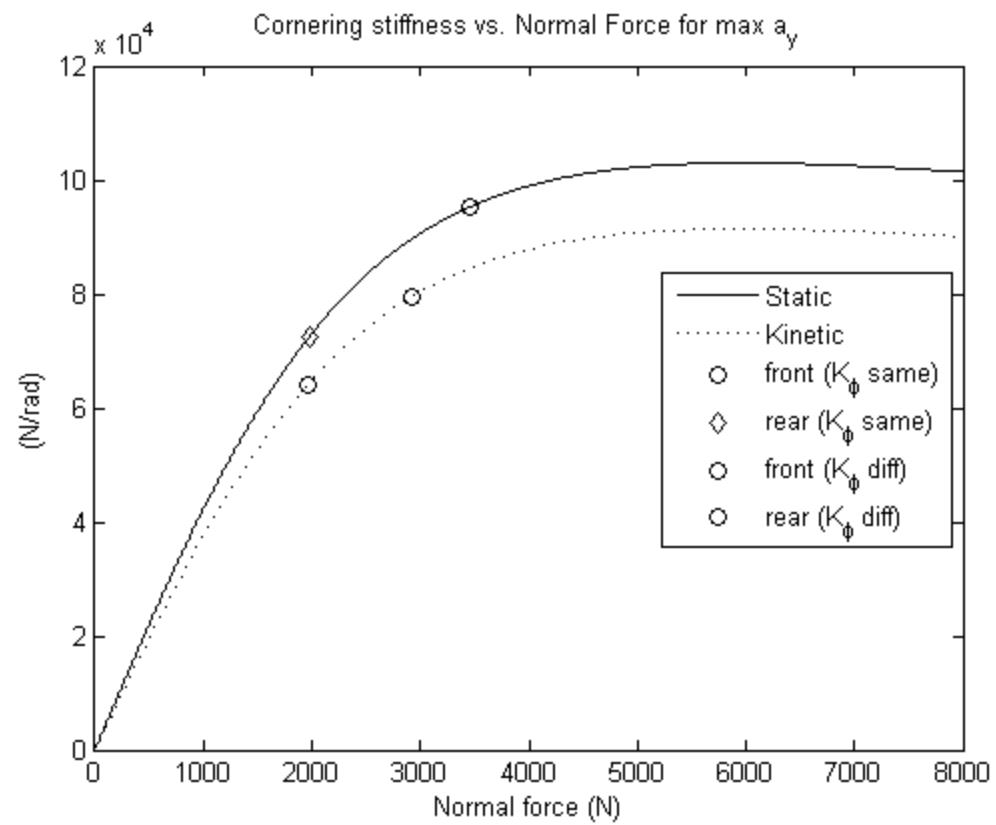

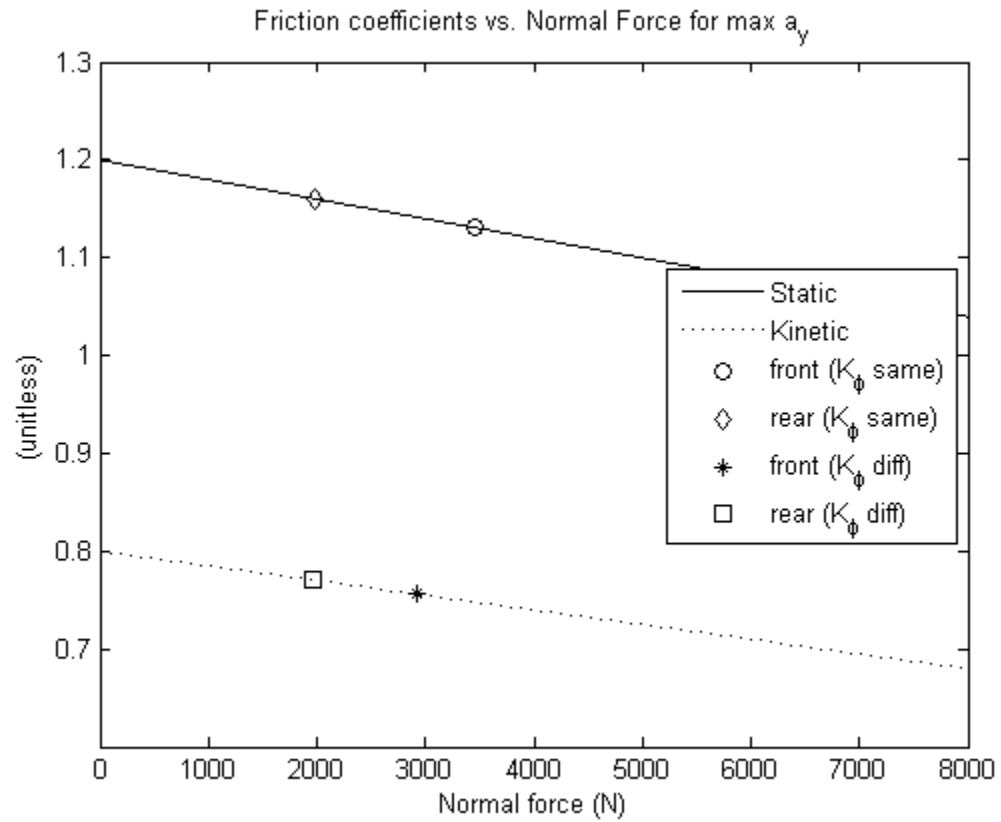

## (7.1.2)

The first case is more understeering. This is what we expect since the front is more stiff, therefore more weight will transfer in the front, leading to limit understeer behavior. The stabilizer bar has an effect at high lateral acceleration.

**(7.1.3)**
